## Security Updates

See the [Security Center](#) for information about known and resolved security vulnerabilities.

## Installation

Consider the following guidance when installing or updating to Poly UC Software 6.2.1:

- You must use Better Together over Ethernet (BToE) 4.3.0 or later with UC Software 6.2.1. Poly recommends that you upgrade existing BToE and PDC desktop applications to the latest version starting with Poly UC Software 6.2.1. If you update the BToE or PDC application without updating to UC Software 6.2.1 or vice versa, the applications don't work with Poly phones.

For more information, see [Updating to the Latest Versions of the Polycom Better Together over Ethernet \(BToE\)](#) and [Polycom Desktop Connector \(PDC\) Desktop Applications \(EA 318\)](#).

## Download the Distribution Files

To download UC Software 6.2.1, you can choose the combined UC Software package or the split UC Software package, both in ZIP file format. The combined version contains all files for all phone models. The split software package is smaller, downloads more quickly, and contains sip.ld files for each phone model. This enables you to choose provisioning software for your phone model and maintain software versions for each model in the same root directory.

For general use, Poly recommends using the split resource file that corresponds to the phone models for your deployment. To match the correct UC software resource file to your phone model, see the [Combined and Split ZIP Files](#) table. If you're provisioning your phones centrally using configuration files, download the corresponding resource file and extract the configuration files to the provisioning server. Make sure that you maintain the folder hierarchy in the ZIP file.

The current build ID for the sip.ld and resource files is UCS 6.2.1.1508 rts35.

## ***Understand the Combined and Split ZIP Files***
